

FLÜSH GUARD™

ANTI-OVERFLOW TOILETS

A complete program of toilets featuring exclusive overflow protection that customers will love. They provide peace of mind, and here's how they work...

SELF CLEANING

Secondary trapway is washed clean with every flush.

MAIN TRAPWAY CLOG

BACKUP TRAPWAY

When the main trapway is clogged (as shown) the secondary trapway will drain the toilet to avoid overflow.

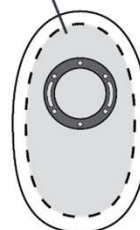

THREE ANTI-OVERFLOW HOLES

Allow rising water to drain down and avoid overflow.

EXTRA-LARGE FOOTPRINT

With the industry's largest footprint, a Flush Guard™ Toilet completely covers the area of the old toilet, eliminating costly surface repairs.

Flush Guard overflow holes allow rising water to drain from the bowl before the toilet overflows.

Installs like a regular toilet, no special tools required

The secondary trapway delivers rising water directly into the main sewer drain
