# **Types of Patient Lifts**

#### **ELECTRIC**

Designed for residents who cannot support their own weight.

- Can lower to assist fallen residents off the floor
- Vertical style lifts residents straight up and down for easier positioning

## SIT-TO-STAND

Made for residents who can bear at least some of their own weight.

- More dignified and conducive to resident
  involvement
- Features a small footprint for easy storage

## Glossary

## **CRADLE POINTS**

Sling attachments. Lifts typically accommodate slings with four or six cradle points.

#### **BASE WIDENING**

- Powered base widening only requires the push of a button
- Manual base widening, whether by hand shift or foot pedal, places some strain on the caregiver

#### **BASE CLEARANCE**

To maximize effectiveness, consider the base clearance of your lifts to ensure they fit under existing beds.

## **Important Sling Information**

There are a number of full body slings with a variety of characteristics. Take note of each sling's:

- Weight capacity
- Material construction
- Size
- Number of hookup points

## NON-POWERED (MANUAL)

- For residents requiring minimal assistance.
  - Allows for quick and easy transfers
  - Features a compact design
  - No batteries required

#### **BATHING**

Made for residents who need assistance with bathing.

• Allows for efficient transfers by gently and safely lowering or raising residents into or out of a tub or bathing area

Other considerations include:

Padding

- High back section
- Brushed lining to
  Prevent sliding
- Waist belt
  Stretch resistance
- Positioning strap
  opening

## 1-800-431-3000 • En español 1-800-511-5652 • hdsupplysolutions.com

BASE LENGTH AND WIDTH

Shorter base lengths and widths allow a lift to be used in tight spaces. The base of the lift should open wide enough to fit around the equipment a resident is being transferred to or from.

## **HEIGHT RANGE**

Full travel height range allows lifting from the floor.
